PROFESSOR

Introduction

In Portfolio 6: Lists, highlights the concept of lists from Lesson 8 in *Computer Fundamentals and Programming*. I designed a program that simulates a **TO-DO LIST**, reflecting how lists are used in everyday businesses.

In applying the concept of **lists** in programming by designing a system that simulates a TO-DO lists. The goal is to demonstrate how lists can organize and manage multiple items efficiently. This creates a program that allows users to add, remove, and update, use list operations such as in store and manipulate data such as item names, quantities, and prices. The program successfully manages multiple uses of lists, showing how lists streamline data handling in everyday applications.

Design of the Program

```
#Daily To-Do List

[1]: tasks = []

[1]: while True:
      task = input("Enter a task (type 'done' to stop): ")

      if task == 'done':
          break

Enter a task (type 'done' to stop): Study ComProg
Enter a task (type 'done' to stop): Study AnaChem
Enter a task (type 'done' to stop): Take a short break
Enter a task (type 'done' to stop): Study Calculus
Enter a task (type 'done' to stop): Study Physics
Enter a task (type 'done' to stop): Jogging
Enter a task (type 'done' to stop): done

[8]: print("My To-Do Lists:")

My To-Do Lists:

[ ]:
```

#Daily To-Do List

```
[1]: tasks = []
```

```
[1]: while True:
      task = input("Enter a task (type 'done' to stop): ")

      if task == 'done':
          break
```

```
Enter a task (type 'done' to stop): Study ComProg
Enter a task (type 'done' to stop): Study AnaChem
Enter a task (type 'done' to stop): Take a short break
Enter a task (type 'done' to stop): Study Calculus
Enter a task (type 'done' to stop): Study Physics
Enter a task (type 'done' to stop): Jogging
Enter a task (type 'done' to stop): done
```

```
[8]: print("My To-Do Lists:")
```

```
My To-Do Lists:
```

Figure 1. I experience error in typing the `tasks.append(task)` which I can't figure it out.

```
